Project Information

Title: Intelligent MegaSwapBoxes for Advanced Intermodal Freight Transport

Duration: 3 years

Starting date: 01/04/2008

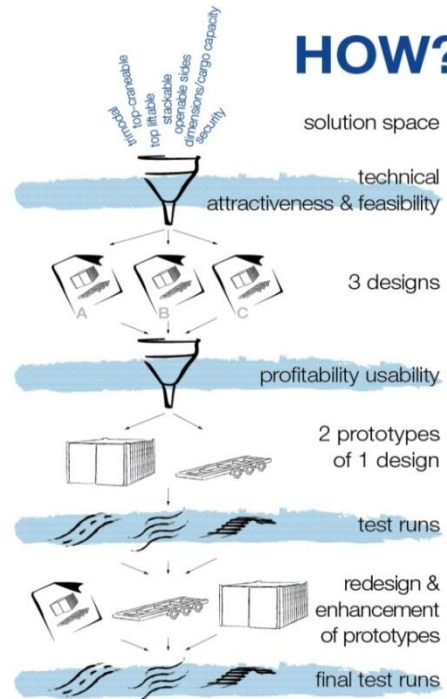

EC funded budget: 3.099 M EUR

TelliBox – Intelligent, easy and advanced

The project “TelliBox–Intelligent MegaSwapBoxes for advanced intermodal freight transport” has been co-financed by the European Commission due to the increasing demands from politics and society to counteract the trend towards increasing freight transport on roads. It focuses on the development of an all-purpose loading unit, applicable in intermodal transport of road, rail, inland and short sea shipping.

The recent testings of TelliBox have effectively demonstrated its reliability and expectations!

HOW?

TelliBox

MegaSwapBox Successfully Tested

After a successful certification for the application in freight transport (UIC, CSC und DIN EN 12642 Code XL), the MegaSwapBox was also successfully tested on over 5000 km long trimodal demonstration track. Within the first of two demonstration phases, the MegaSwapBox and its chassis covered typical routes on which goods of the automotive industry are presently transported. Currently, these transports can only be made on road, inland and short see shipping without exchanging the carrier. Based on the findings of the demonstration phase an improvement of the MegaSwapBox and its chassis will now follow. After the technical and operational adjustment of the prototypes they will be re-tested and evaluated in a second demonstration phase in January 2011.

TelliBox at the 'Intermodal Europe 2010' Amsterdam

"TelliBox – Intelligent MegaSwapBoxes for advanced intermodal freight transport" will be presented at the next Intermodal Europe 2010, that will take place at the Amsterdam RAI from 30th November to 2nd December. A specific session has been scheduled for TelliBox, in which Mr Heiko Sennewald, Senior Consultant Logistics for Ewals Cargo Care, will introduce the innovative features of the MegaSwapBox.

We take this occasion to invite all the

interested people to come to the stand of the European Intermodal Association (stand nr. D76), where it will be possible to have even more information about TelliBox.

TelliBox final event in Duisburg

TelliBox project is approaching the end. Therefore a final event showcasing the Box will be organised before the contractual end of the project with the European Commission.

The event will be kindly hosted by

DKT Terminal

**Rotterdammer Strasse 49 / Hafen 7715
on 19 March 2011 from 9 am.**

Since the Terminal is running operations all day long, the only day in which we could show the handling process of TelliBox is Saturday.

The partners of the project will be particularly happy to share the result of TelliBox with all the people that have worked on it and all the persons interested in having more "live" information about the new intelligent MegaSwapBox.
